USER GUIDE
HOW TO SETUP YOUR SKY AIR PREMIUM

HOW TO SETUP YOUR SKY AIR PREMIUM

1

Unpack your bag and unfold your Fanatic Sky Air Premium on a flat surface - grass is ideal.

2

Make sure the valve of the board is in the outer/upper position. The valve must be released for inflation. To release the valve, push slightly downwards and twist to the right until you find the upper position. Connect the air hose with a twist to the pump and plug the end piece of the hose into the valve of the board without adapter. Turn it clockwise for a safe connection.

3

Pump until you reach 15 PSI minimum pressure, for more stiffness you can inflate up to 20 PSI. If it gets too exhausting, switch from double to single stroke action. It's much easier to reach full pressure with single stroke action.

4

Insert the supplied track nuts into the base plate slots. Position your foil on the tracks and align the track nuts under the inserts for the screws. Insert the screws and tighten them.

ATTENTION - Only use with supplied track nuts and screws - track nuts with open bottom and longer screws can damage your board!

HOW TO SETUP YOUR SKY AIR PREMIUM

5 Attach the adapter to the pump hose to inflate your Duotone Foil Wing or use an additional adapter for other wings.

6 Connect the air hose with the wing and pump until you reach the recommended pressure of your wing – mostly around 6 PSI.

ATTENTION – Don't inflate your wing to the recommended pressure of your board, this will damage your wing!

7 Connect yourself with the board and wing using leashes to be safe on the water. Make sure you walk into the water with the foil facing the wind, so you avoid contact of foil and wing.

8 You're done. Have a lot of fun!
